"FLYING INTO THE 21st CENTURY"
www.gatewaydiscsports.com

The same company
that revolutionized the
Golf Bag Market,
Now manufactures golf
discs using superior
plastic polymers.

TPE Polymer Blend

SABRE 21.1cm 140-176g Long Range Driver
The Sabre is a long, fast and accurate driver.
This disc is very versatile and is great for the beginner or pro.
Some weight has been transferred off of the rim and
redistributed behind the rim and in the flight plate (*see what
makes a disc fly on our website*). Long left to right throws will
stay on their flight path longer without falling off, while long right
to left shots will stay gliding with out hyzering out. Straight flat
drives will stay straight and only fall off slightly at the end of the
flight. (Also a good tomahawk discs)

TPU Polymer Blend

APACHE 21cm 140-175g Long Range Driver
Made of Polyurethane & available in tie-dye
The Apache is very similar to the Sabre in stability. The disc
has a little more of a dome to it, which gives it more glide at the
end of the flight. Being able to throw this disc left to right (for
right-handers) makes this a good choice for your first driver.
The unique blend of plastic (*see plastic for discs on our
website*) makes this disc extra durable. Most of my competitors
beginner discs are made of inexpensive plastic and are usually
worn out by the time you learn how to throw it. The Apache will
keep its shape and original flight characteristic for a long time.

BLAZE 21cm 140-175g Long Range Driver
The blaze is a very over-stable driver that is great into a
headwind and for long s-curve shots. (Great for sidearms and
tomahawks) With a longer breaking in period than most discs
on the market you won't have to run out and get a new one
every time you hit a tree. In fact, once you get this disc broken
in it will have the same predictability and control of your favorite
over-stable mid-range disc

WARRIOR 21cm 140-175g Long Range Driver
Made of Polyurethane & available in tie-dye
The Warrior is a long range driver that flies straight for 90% of
its flight then has a slow left fade at the end. This disc can be
used for an over-stable mid-range driver and is great in windy
conditions. With the same durable plastic as the Apache it
should give you great predictability for a long time. (A good
sidearm and tomahawk disc)

DEMON 21cm 140-175g Mid Range Driver
This disc is demonically over-stable when new. Great for S-
curves, side-arms and tomahawks. Made from the same
plastic as the new Sabres this disc will break in after a while to
become a straight line flying mid-range. Somewhat similar to
the scout but very flat on top. This disc feels very comfortable in
the hand when using the power grip. Wind has no effect on the
flight.

SCOUT 21cm 140-175g Mid Range Driver
Made of Polyurethane & available in tie-dye
The Scout is a very durable over-stable mid-range driver. This
disc is slower than the other gateway drivers but faster than
most mid-range discs on the market. This disc will also have
more glide at the end of its flight as it domes up on top to
create a pocket of air under the flight plate. A great side arm
disc for mid-range drives.

WIZARD 21cm 140-175g Putter - Approach Disc
The Wizard is a durable stable approach disc and putter.
This is the hottest putter on the market.

CHIEF 21cm 140-175 Putter - Approach Disc
Made of Polyurethane & available in tie-dye
The Chief is a very durable stable approach disc and putter.
